

Meet Your Radiologist

Memoona Mian, MD, FCPS, DABR

Radiology is an extremely cerebral subspecialty, which has become the nucleus of how modern medicine is practiced. It is a perfect blend of technology and medical knowledge, being essential in both diagnosis and treatment of various diseases. I have always found this challenging and intriguing at the same time.

Why I Chose Health Care

I had always considered medicine a very fulfilling profession; a balanced blend of knowledge, humanitarian service and personal career stability and growth.

English, Urdu, Punjabi

Cooking and baking help me relax and unwind. As a nature lover, I also thoroughly enjoy going on long walks, especially during fall and spring time.
